Oberon Announces Contract Win: Multispectral Fingerprint Capture

Oberon, A Stanley Company, and its partner company, Lumidigm, recently won a \$1.7M contract to begin 24 March 2009 for the development of multi-spectral fingerprint technology. Quality digital fingerprint capture is a challenge in a field environment because the collection is adversely affected by environmental factors such as moisture and high ambient light, conditions.

Together, Oberon and Lumidigm will provide a solution that can be used to greatly enhance support for force protection, civilian disaster assistance, border security, law enforcement and intelligence collection efforts. The proposed solution will be an important capability for the Warfighter and would be employed in the Concept of Operation of numerous Battlefield Operating Systems, including Military Police, Military Intelligence, and Special Operations Forces. This solution, when deployed, will be a significant enhancement to efforts in the Global War on Terrorism.

We are proud and honored to be selected for this critical effort in our continuing support to our Military and the DoD Biometrics effort.
