### **Unisys Selects Lumidigm to Develop Anti-Spoofing Optical Deep Tissue Biometric Sensor for Detecting Live Tissue**

Lumidigm, Inc., a New Mexico-based company that has developed a new biometric method of identifying people based on optical skin tissue measurements, has been awarded a development contract by Unisys Corporation. This contract is in support of a Research and Development Task Order Unisys has with the Department of Defense for Biometrics R&D Support. Lumidigm will use its technology (LumiGuard™) to develop an anti-spoofing sensor (LumiSure™) for measuring liveness and other properties of live human tissue. The targeted application of the LumiSure technology will be to integrate the sensor with fingerprint and hand geometry sensors to reduce or eliminate the potential of fraud using artificial methods. Lumidigm is scheduled to deliver the first prototype sensor during the first quarter 2004.

“Lumidigm is pleased to be partnered with Unisys to create this unique biometric sensor that will reduce or eliminate the most common ways to spoof fingerprint and hand geometry systems on the market today,” explained Lumidigm’s chairman and CEO, Bob Harbour. “As the federal government continues the wide-scale deployment of biometric solutions for heightened security, participation in projects like this, with Unisys, will provide us with the opportunity to further improve our state-of-the-art biometric technology. This contract will allow Lumidigm to continue to be a leader in technological development within the biometric community.”

#### **About Unisys**

Unisys is a worldwide information technology services and solutions company. Its people combine expertise in systems integration, outsourcing, infrastructure, server technology and consulting with precision thinking and relentless execution to help clients in more than 100 countries quickly and efficiently achieve competitive advantage. For more information, visit [www.unisys.com](http://www.unisys.com).

#### **About Lumidigm**

Lumidigm has created an entirely new form of biometric measurement device that will impact literally hundreds of millions of people worldwide. Lumidigm envisions a future where consumer products like cell phones, PDAs, automobiles, and even handguns have personalized protection. Lumidigm, Inc. was established in July, 2001 as a separate, privately held, spin-off company from InLight Solutions. Lumidigm is located in the Science & Technology Park at the University of New Mexico, in Albuquerque, NM. The company can be contacted at 505-272-7084, on the web at [www.lumidigm.com](http://www.lumidigm.com), or by email at [info@lumidigm.com](mailto:info@lumidigm.com).

Lumidigm, LumiGuard and LumiSure are trademarks or registered trademarks of Lumidigm Incorporated in the United States and other countries.
